## **kobold Litepipe for DW 400**

**The optimum light solution - not only for situations with limited space**

The **Litepipe** is a foldable light tube to convert the narrow light beam of a PAR reflector without a PAR lens into a soft, homogenous, linear light source with low heat radiation and, simultaneously, a high light output. Fast and without any tools the Litepipe may be mounted in less than one minute. A high-quality transport bag is included in the scope of delivery.

The Litepipe is ideal for applications with limited space, such as in low-ceilinged rooms, railway-cars, lifts, etc., to highlight windows and doors, etc. Thanks to its slim construction it may be easily hidden in the set, e.g. behind columns, trees, in niches.

For more information please contact the kobold dealer in your country or visit us on [www.bron-kobold.com](http://www.bron-kobold.com)
